The Company

Loghouse was first established in Ireland in 2007. With over 10,000 installations to date we are Ireland's leading supplier of log cabins and garden outbuildings. We pride ourselves in being able to offer fully bespoke or customised log cabins to the customer's specifications. Currently the company operates from five locations within Ireland. We have a team of in-house sales associates, designers, architects and project managers with over 50 years of combined experience in the building industry.

At **Loghouse** we design and build a comprehensive range of premium quality log houses and cabins intended specifically for the Irish market and the weather conditions that Ireland provides. We offer the widest choice of log buildings available in Ireland which include four and five bedroom homes, holiday chalets, multi function log cabins, garages, and stables.

Why Us

All our structures have been specifically designed for the Irish climate with damp proof membranes, extra window seals, end trims and sealants to protect against the harsh Irish climate. Our foundations are designed to keep dampness away from the structure ensuring a longer lifespan of the building. These measures allow us to offer a written ten-year guarantee direct from our factory. All our timbers are from slow grown Scandinavian Pine and are FSC (Forest Stewardship Council) certified, certificates available upon request. Our people are well trained in their fields, safety certified and bonded for your reassurance. We practice CPD (Continuous Professional Development) as part of our commitment to stay up to date with the newest ideas, standards and techniques within the industry.

Our Factory

Our state of the art factory was established in 1995. Currently there are over 200 staff manufacturing all components of the cabin from the structural timbers to the doors and windows to the roof cladding. This guarantees a level of quality within the structure eliminating outsourcing from multiple manufacturers. All our timber is treated and milled by the finest German made machinery to the highest of tolerances. Our factory uses all of the timber purchased, where offcuts are used in glue laminate manufacturing and even the sawdust is reconstituted into wood pellets for stoves.

Tailor-made Building Solutions

At **Loghouse**, we offer a "bespoke" or custom design service to tailor all our pre-engineered models to your needs or start from scratch with your own idea with help from our highly qualified team of planners and log cabin experts, we will guide you through the design process. Our staff can provide working drawings, three dimensional renderings and technical specifications to suit your specific design so you can "see it" in real time before it is even built.

Log House buying Checklist

Ask The Question	Loghouse	Competitor
Safety Glass	✓	
Full Company Insurance	✓	
FSC Certification (FSC-C222090)	✓	
Structural Bond for habitable dwellings	✓	
Fully Bonded 10 year Manufacturers Guarantee	✓	
Safe Pass Employees Trained Installation Technicians	✓	
Over 50 years experience in Log Cabins & Construction Industry	✓	
Quality of Timber Scandinavian Pine	✓	
Is the model available for viewing?	✓	
All Doors and Windows – PVC framed, 5x point clocking, 24mm argon gas filled double glazing, built-in micro ventilation. Meets or exceeds Irish building standards for domestic building	✓	
Exterior wall covers on end of log junctions	✓	
Rainwater skirting flare around the cabin	✓	
Standard completion list at the end of the build	✓	
Free weathering package for better protection on all cabins	✓	
Dedicated after sales & quality control teams	✓	
More than 9000 cabins assembled Nationwide	✓	
5x showrooms across Dublin, Cork & Athlone	✓	
External insulation & shiplap cladding option for better protection & extended longevity	✓	
Steel flashings and facias on all roofs as standard	✓	
In-house groundworks & plumbing service to avoid expensive subcontractors & save all the hassle.	✓	
Pressure treated floor bearers as standard on all cabins	✓	

Loghouse Quality Guaranteed

Did you know that Loghouse is the only fully certified, insured and bonded log cabin company in Ireland? We carry the following certifications and bonds:

1 FSC Certification. FSC forest management certification confirms that the forest is being managed in a way that preserves the natural ecosystem and benefits the lives of local people and workers, while ensuring it sustains economical viability. Ask to see this from our competitors.

2 As your building is 100% timber it is very important to ensure that your cabin is made from good quality wood to avoid problems like warping, twisting or excessive settling due to timber that has not been dried sufficiently. Where it is grown and how it is cured is of exceptional importance.

3 If the log house is to be a habitable dwelling a 10-year structural guarantee from Global Warranties.

This means your project would be visited at various stages of construction and signed off as completed as per best build practices and building regulations by qualified surveyors and industry professionals.

4 Public liability insurance, product and installation guarantee. We carry the most insurance of any of our competitors in the industry and our insurance certs are on display in all our showrooms. Also on display are the manufacturer's guarantee and our own guarantee of trained, qualified service professionals. All our installers are safe pass certified before they are allowed to walk on a site.

✗ Ask to see the competitors credentials as it may save you the price of the cabin if they do not have the correct coverage and training.

✗ Beware of companies operating with little to no insurance, have the correct training and bonds and always request these documents before making a decision to buy. Your purchase of a cabin is important to you, so take the time and seek a company that not only stands behind their products, but also backs it up with the paperwork to ensure you do not lose your investment should any damages occur or warranty work is required.

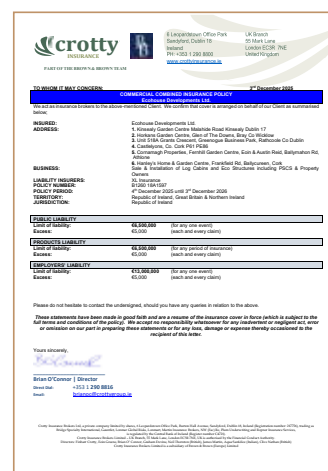

Plumbing & Electrical Works Guidelines

All plumbing, heating, sewage, water mains connection, kitchen and bathroom works are carried out by our in-house team of experts. Please contact us for more details.

PRICE GUIDE:

- Plumbing €1,000 – €2,500
- Heating €1,000 – €5,000
- Sewage & water mains €1,500 – €3,000
- Kitchen €1,000 – €5,000
- Bathroom €1,500 – €5,000
- Main electrical connection starting from €15 per linear meter.
- Ground screws from €110/m²

All prices are subject to site survey and clients specification.

Windows & Doors

Loghouse setting a new standard again!

We are delighted to announce that all our log cabins now include German made Schuco PVC windows and doors. Designed specifically for the Irish climate – definitely the best windows and doors on the market!

The main advantages of PVC windows are considered their high strength, high levels of noise prevention, thermal insulation, long service period, environmental safety and attractive appearance.

24mm Argon gas filled double glazing improves thermal efficiency by 16-30% and should not lose more than 5% of the total gas over a period of 25 years.

Other advantages of Loghouse.ie windows & doors

- 
 Maintenance free PVC windows
- 
 Aluminium thresholds
- 
 Twin rubber seals & extra strong hinges
- 
 3 position window with micro ventilation
- 
 5 Point locking system

Most of our competitors window and door standards

- 
 Basic doors
 45 mm solid wood – industry standard
- 
 Basic hinges
- 
 Single point locks
- 
 Softwood frame with basic fittings
- 
 Manual tilt & turn operation

We have teamed up with Smart Foundations Ireland to provide our clients with a solution for concrete-free foundations at an affordable cost!

Ground screws are installed without digging and damaging your garden or the environment, reducing your carbon footprint. Foundations with ground screws are stable for decades, yet environmentally friendly and removable if necessary. This is the easiest and most cost-effective way to get a timber base done for your garden room or log cabin.

- Cost and time savings
- No digging, no concreting required
- Proven high pressures and pulling-out force
- Instantly loadable with no waiting period
- Sustainable and environmentally-friendly

Option 1: A fully insulated timber frame base is constructed from treated 4x2 inch (50x100mm) timber and supported by ground screws. The base is insulated with EPS 70 100mm and finished with 18mm T&G OSB board, creating a strong, insulated slab ready for flooring.

Option 2: Timber-frame base made out of treated 6x2 inch (50x150mm) timber and supported by ground screws, super sturdy and ready to be built immediately after the installation. Eco-friendly option and can be relocated if needed with minimum disturbance to the surroundings.

THERMO CLADDING

Thermally treated pine products

The use of thermally modified timber has increased significantly across the world over the past 20 years. Products and production techniques have been developed and improved over the decades.

Alternative for Siberian larch

Thermowood is known for its extreme dimensional stability in all climates. The thermal modification with only heat and steam, without any chemicals or toxins, enhances the Finnish Pine and Spruce into a durable and long lasting material for decorative surfaces. Natural greying of **THERMOWOOD** is combined with low maintenance and yet a long life-cycle of the products. All these properties make **THERMOWOOD** a sustainable and technically pre-eminent alternative for Siberian Larch.

Natural Greying

The use of thermally modified timber has increased significantly across the world over the past 20 years. Products and production techniques have been developed and improved over the decades.

Environmentally friendly

No chemicals are used in the production of **THERMOWOOD** products. The production method is a result of extensive development work and it is based on the controlled modification of timber with high-temperature drying, thermal modification & cooling, and moisture conditioning. The process results in permanent physical and chemical changes in the wood. The new properties remain unchanged, even when the timber is processed with methods such as sawing or planing. This also applies to the colour of the product.

Advantages over natural timber:

Thermowood products differ from standard timber in several ways:

- Reduced Swelling and Shrinkage due to Moisture
- Enhanced Dimensional Stability
- Better Biological Durability
- Darker Colour
- No Resin
- Lower Thermal Conductivity

CHARRED THERMO CLADDING

“Shou Sugi Ban” is a Japanese technology designed to create unique wooden products by treating wood with fire. Our craftsmen burn the prepared wood in a special “Shou Sugi Ban” furnace, which creates a unique and durable layer of charcoal.

The special “Shou Sugi Ban” technology we use is inspired by ancient Japanese traditions.

By burning the surface of the wood at very high temperatures, the wood becomes waterproof and more durable, protected against pests and fire.

Yakisugi History:

Yakisugi is a traditional Japanese wood charring method. Yaki means to heat with fire, and sugi is cypress. In the West, it is also known as burnt (charred) wood and is also known as “Shou Sugi Ban”.

By burning the surface of the wood at very high temperatures, the wood becomes waterproof and more durable, protected against pests and fire.

Sustainable Beauty and Original Strength

The main power of fire remains visible in the colour and structure of the wood. All types of wood used have their unique structure and application, both from an aesthetic and a physical structure point of view. Charred thermo wood, made by the “Shou Sugi Ban” method, is very suitable for facade finishing, exclusive interiors, and furniture production.

Advantages:

- 1. Durability:** Shou Sugi Ban significantly enhances the durability of wood by creating a charred layer that acts as a barrier against insects, decay, and weathering. This can extend the lifespan of the wood, reducing the need for frequent maintenance or replacement.
- 2. Resistance to Decay and Insects:** The charred surface is resistant to decay, fungi, and insects. This makes it an excellent choice for exterior applications, where wood is exposed to harsh environmental conditions.
- 3. Weather Resistance:** Shou Sugi Ban cladding is known for its ability to withstand various weather conditions, including rain, snow, and UV radiation. The charred layer acts as a protective shield, preventing the wood from warping, cracking, or deteriorating due to exposure to the elements.
- 4. Low Maintenance:** The charring process creates a low-maintenance finish. Unlike untreated wood, Shou Sugi Ban cladding requires minimal upkeep. The charred surface helps in repelling dirt and dust, making it easier to clean and maintain the appearance of the wood.
- 5. Aesthetic Appeal:** Shou Sugi Ban cladding has a unique and striking appearance. The charred surface brings out the wood's natural grain and texture while creating a visually appealing contrast. The technique can be applied to various wood species, allowing for a range of design possibilities.
- 6. Fire Resistance:** While it might seem counterintuitive, the charred layer can contribute to the wood's fire resistance. The outer layer can act as a protective barrier, making it more challenging for fire to penetrate the wood and spread.
- 7. Sustainability:** Depending on the source of the wood, Shou Sugi Ban can be considered a sustainable choice. The process involves using natural materials and can be applied to wood from responsibly managed forests, contributing to environmentally friendly building practices.
- 8. Natural Insulation:** The charred layer can provide some level of insulation to the wood, helping regulate temperature and potentially improving energy efficiency in buildings.

Titan Radiators

Electric Wall Hung Radiators with WiFi Control

Simple, elegant and stramlines, the Titan radiators are wall mounted to free up floor space. Featuring top panel operating controls as well as the convenience of woresless control via Tuya App.

This elegant oil filled wall mounted radiator comes in 4 sizes to cater for different heating areas. The unit is presented in sleek modern white aluminium. Conveniently control your radiator wirelessly via Tuya App or use the manual control panel which is located on top of the unit to make access easier when furniture is in the way. With a 1.5M flex cable.

Features

Control Via App

Wirelessly control your radiator via Tuya app. Super handy for when you are not at home.

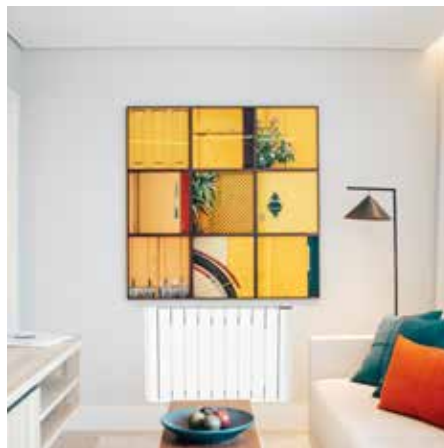

Oil Filled Radiator

Oil filled to provide a comfortable heating environment.

24 Hour Timer

Set the 24 hour timer to the times you require so your room is warm when needed.

Open Window Function

If room temperature drops by 2 degrees, the radiator will turn off and switch back on after 10 minutes.

Warranty

10 years on aluminium, 2 years on electrics.

Control Panel

The manual control panel is located on top of the unit. This makes access easy when furniture is placed in front it.

4 Operating Modes

1. Eco
2. Comfort
3. Anti Freeze
4. Weekly Program

Optional Extras

Wheels available - converting the radiators for moveable freestanding use.

Premium Sauna Luna 3.3x2.1m

Price
€14,400

- Price includes:
- FREE** Damp proof membrane
 - FREE** 100mm roof insulation
 - FREE** 100mm wall insulation
 - FREE** Weathering package
 - FREE** Gutter and downpipe

Experience luxury and relaxation with the Luna, a premium thermally treated Nordic pine sauna, designed for ultimate comfort and durability. This insulated sauna offers a modern and stylish retreat, featuring large panoramic glass for an open and immersive sauna experience.

Key Features:

- **Spacious & Comfortable** – Designed to accommodate 2-4 people comfortably.
- **Premium Thermowood** – Constructed from thermally treated Nordic pine, ensuring enhanced durability, weather resistance, and longevity.
- **High-Performance Heating** – Equipped with a Harvia electric sauna heater, with an option to upgrade to a solid wood-burning stove upon request.

- **Insulated for Efficiency** – Built with high-quality insulation for optimal heat retention, making it perfect for year-round use.
- **Panoramic Glass** – Large glass panels create a sleek, modern look while allowing natural light to enhance the sauna experience.

A perfect blend of Scandinavian craftsmanship and modern luxury, the Aurora sauna is designed to elevate your wellness routine with premium materials, efficient heating, and elegant aesthetics.

Upgrade your relaxation experience with the Aurora Sauna – where tradition meets contemporary design!

Introducing our new Hybrid log cabin range, a perfect blend of traditional charm and modern innovation. The Hybrid log cabin features a robust structure crafted from 45/58mm solid log walls, made from slow-grown, FSC-approved Scandinavian Pine. This high-quality timber adds warmth and cosiness to the interior, ensuring a comfortable living space.

For superior insulation, the cabin incorporates top-quality insulation materials and breathable damp-proof membranes. This meticulous insulation process ensures excellent thermal performance, keeping the cabin energy-efficient and comfortable year-round.

All Hybrid log cabins come equipped with premium German-made Schüco anthracite grey uPVC windows and doors. These high-quality fittings not only enhance the cabin's thermal efficiency but also add a sleek, contemporary look.

The exterior of the Hybrid log cabin is designed for both aesthetics and durability. Three sides are finished with sleek steel cladding, providing a contemporary, maintenance-free facade. The front wall of the cabin is finished with thermally treated pine cladding, enhancing its visual appeal and adding a touch of luxury.

The Hybrid log cabin is the ideal choice for those seeking a blend of classic log cabin ambience and modern, low-maintenance exterior finishes. Enjoy the best of both worlds with our innovative and stylish Hybrid log cabin range.
